

FLY SMARTER

Worldwide inflight connectivity and entertainment solutions

connect

In air. Online. Everywhere.

In today's hyper-connected world, so much can happen during even short flights. Emails pile up, phone calls and texts get missed, and work and life have to wait.

Gogo can help you fly smarter.

Gogo's proven solutions let everyone on board stay connected to their business and personal lives while in flight. From single aircraft to global flight departments, we offer the world's most powerful and reliable inflight connectivity and entertainment solutions, for the world's most important missions - yours.

Gogo support 28-29

Your trusted global service provider.

Gogo is the only company with the breadth of services to enable connectivity service on 5 popular networks under one roof, no matter where you fly in the world:

- Jet ConneX
- SwiftBroadband
- Classic Aero
- Iridium®
- Gogo Biz®

Why choose Gogo as your provider?

Gogo powers you inflight so you can accomplish whatever your mission requires - calling and texting using your own phone, surfing the Internet, sending and receiving emails with attachments, watching your favorite movies & TV programming on-demand, and so much more.

01

BILL CONSOLIDATION

No matter how many services you have with Gogo you'll only get one bill, keeping things simple and easy to manage.

02

24/7/365 SUPPORT

One award-winning stop for all your customer service needs.

03

SINCE THE BEGINNING

Gogo's been in the connectivity business for more than 25 years, running our own domestic network that serves tens of thousands of aircraft. We know the ins and outs of inflight connectivity making, Gogo your partner of choice for IFEC solutions.

04

HARDWARE AGNOSTIC SWIFTBROADBAND PROVIDER

It doesn't matter where you've gotten your hardware from, or what equipment it is, Gogo can provide your service.

A higher inflight IQ.

01

SMART AIRPLANES. CREATING CONNECTIONS.

Inflight entertainment and connectivity (IFEC) offers benefits well beyond checking emails and watching movies. Gogo solutions help aviators worldwide raise their inflight IQ and enable passengers, pilots and planes in ways never before possible.

03

BETTER INFORMED PILOTS.

Raising awareness for everything from turbulence to fuel prices. Connectivity gives pilots real time data in flight. Data that gives them more current, more accurate information in the cockpit.

02

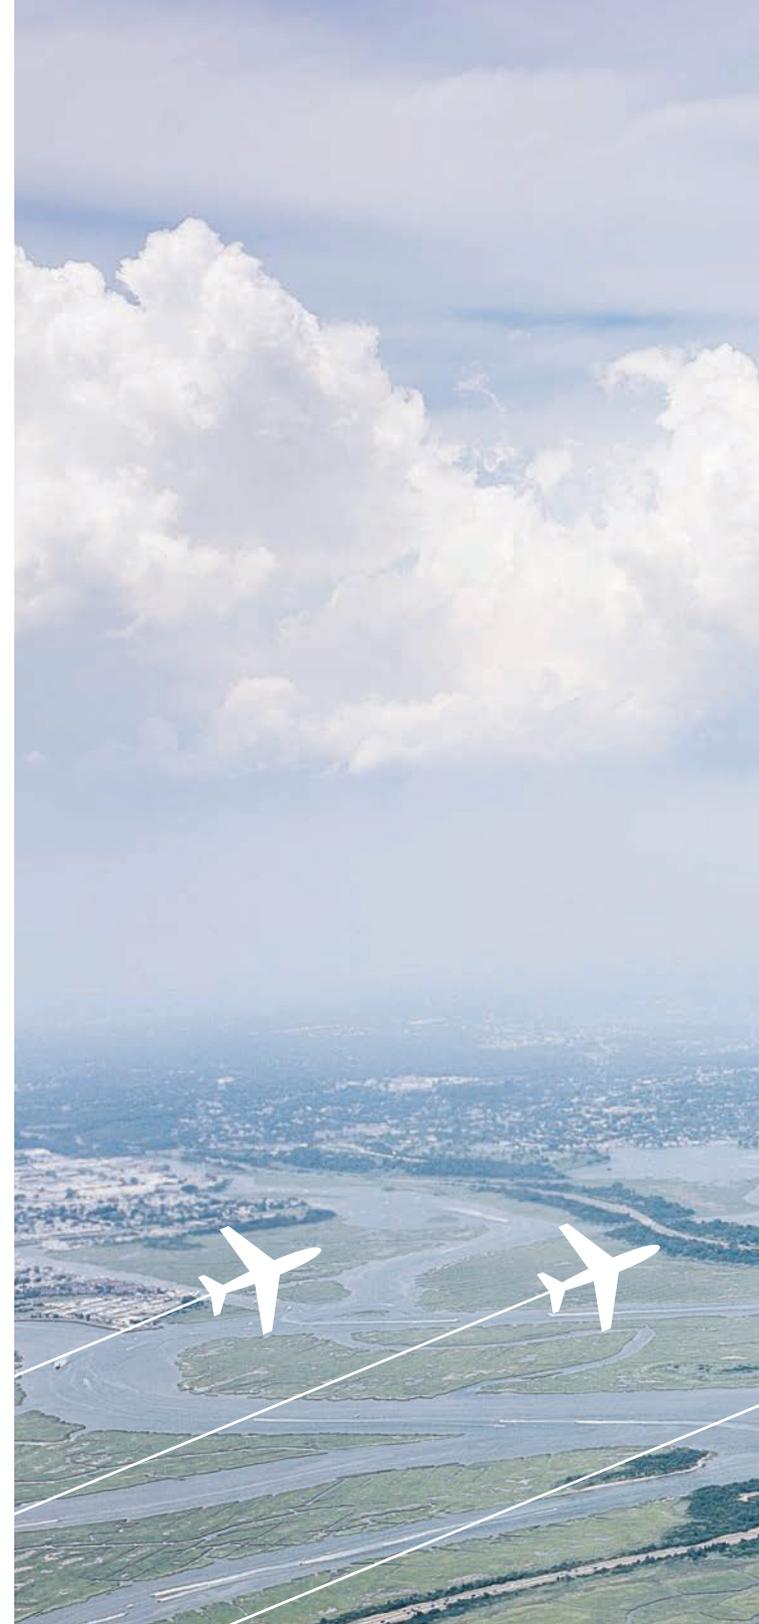

FULLY CONNECTED PASSENGERS.

IFEC connects passengers to their offices, clients, families, friends, tools, services and apps. So they can seamlessly work, live and play in flight.

04

STRONGER, MORE EFFICIENT OPERATIONS.

Gogo solutions help operators of all types – from fleets and flight departments to charter operators – realize new efficiencies. Find out how IFEC is a competitive advantage, a business necessity, and can impact your bottom line through lower costs.

SwiftBroadband

Global data/voice capability

SwiftBroadband is Inmarsat's proven, global, aeronautical service. A very affordable solution, SwiftBroadband - an IP-based packet-switched service with "always on" data connectivity - makes inflight connectivity a reality for virtually any business aircraft. It is well suited for passengers who need basic business applications (Internet, email, VPN), as well as high-quality Inmarsat voice communications.

The compact, near-global connectivity solution with a complete range of features.

Near-global connectivity for basic Internet and voice

*Gogo provides service for any SwiftBroadband equipment.

AVIATOR 200

Take your productivity global but still pack light.

Multi-regional connectivity for basic Internet and voice

Classic Aero

Safety services, voice, fax
and low-speed data

Gogo knows that some global operators simply want reliable, proven satcom service for fundamental cockpit and cabin needs. That's why Gogo offers Inmarsat Classic Aero service. Classic Aero gives you flexible options for enabling voice, fax and data communications anywhere you fly, except for the extreme polar regions.

And by partnering with us, you can also easily upgrade to SwiftBroadband should you need higher bandwidth for more data-intensive applications. SwiftBroadband users are able to concurrently use SwiftBroadband and safety services, given the availability of Aero H+ and Aero I on both Inmarsat-3 (I-3) and Inmarsat-4 (I-4) satellites.

Voice

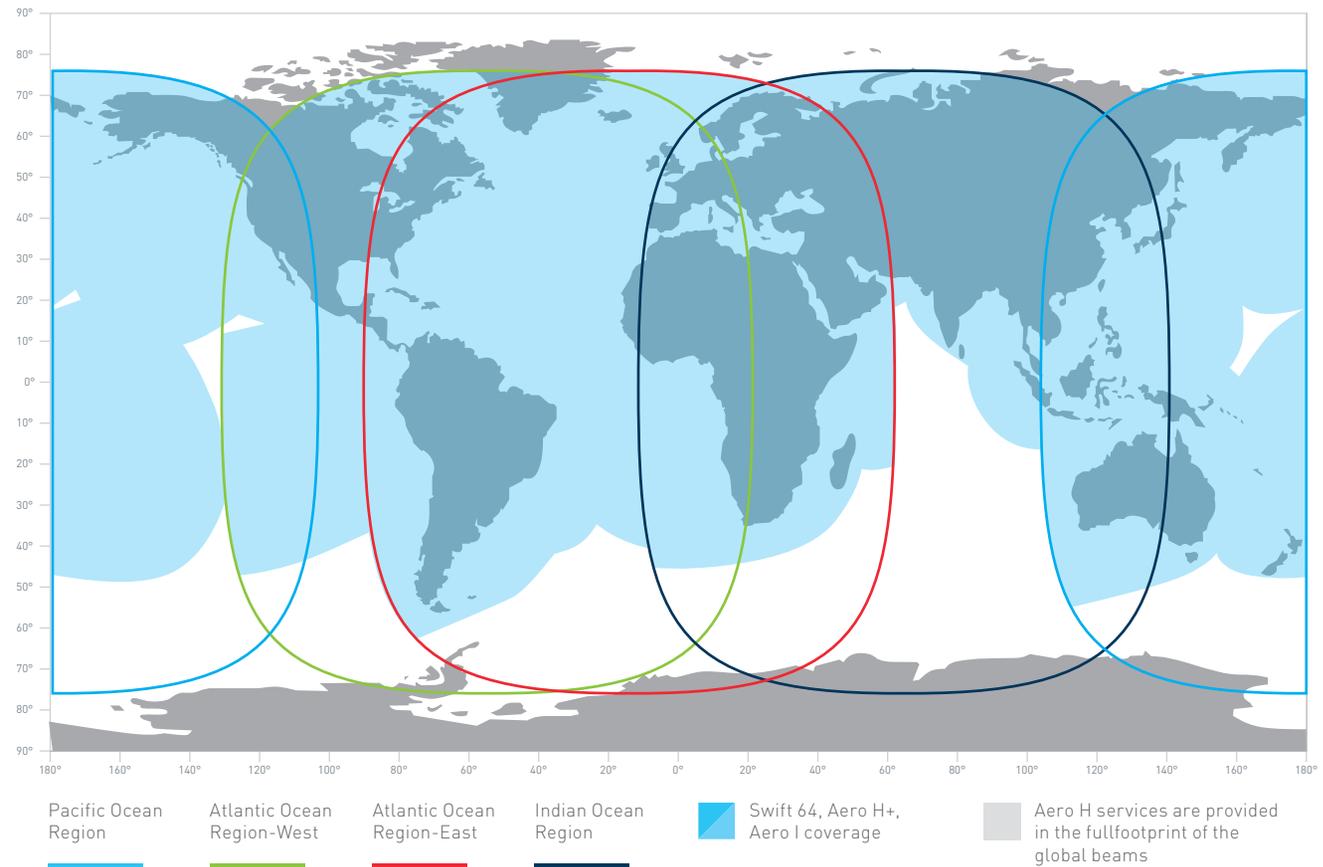

Safety services

Fax

PERFORMANCE

- Enables voice services and datalink
- Designed for medium and wide body aircraft
- Global coverage, except extreme polar regions

OPTIONS

AERO H

Aero H provides packet data rates of up to 10.5kbps for ACARS, FANS and ATN communications and up to 9.6kbps per channel for multi-channel voice, fax and data communications, through a high-gain antenna – anywhere in the global beams of the I-3 satellites. Applications include passenger, operational, administrative and safety communications.

AERO H+

Aero H+ offers all the features of Aero H, but uses the I-3 regional spot beams and 4.8kbps voice codecs to deliver voice services at lower cost. Outside the regional spot beams, Aero H+ terminals operate in the global beams in the same way as standard Aero H systems. Aero H+ is also available in the full I-4 satellite footprint.

AERO I

Aero I uses intermediate-gain antennas and supports I-3 global beam packet data and I-3 regional beam, multi-channel voice and 4.8kbps circuit-mode data services. Aero I packet data is also available in the full I-4 footprint.

Iridium®

Global voice and narrowband data

The popular and cost-effective Iridium satellite network enables global voice service in flight. It also helps you achieve compliance with Future Air Navigation System (FANS). This best of breed network is also perfect for narrowband data applications like fax, cockpit data, data safety services, and more. The network runs on Low Earth Orbit satellites for reliable global coverage in the air and on the ground at all altitudes and latitudes — even over polar regions.

UCS 5000

The world's first and only Smart Cabin System

UCS 5000 is business aviation's first and only Smart Cabin System. More than a router, and well beyond an IFE service, UCS 5000 is a singular unit that orchestrates, manages and delivers today's incredible array of data, voice, entertainment, information, and cabin management services. As a smart router, it dynamically manages multiple networks. As a full-function media server, it's your gateway to Gogo Vision inflight entertainment, as well as file sharing and access to your Cabin Management System. And, of course, it enables a full-featured voice experience.

The safety and operational efficiency benefits of Connected Aircraft Services

Can connectivity improve operational safety and efficiency for business aviators? We're proving that it can. Gogo is at the forefront of using real-time, global airborne data to help aviators today, and we're working on the game-changing, IoT-based innovations of tomorrow.

CONNECTIVITY CAN IMPROVE:

- Situational awareness
- Weather information
- Flight planning
- Fuel savings
- Operational efficiency

Real-time data unlocks the full potential of cockpit and operational apps

"IoT is where objects or devices, like aircraft or avionics, are connected and exchanging data with other systems. It's where everything effectively becomes a node on a network, and we're able to sense and monitor the status of those devices."
